

Best Frontend Development Interview Questions

30 essential questions covering HTML, CSS, JavaScript, frameworks, and performance

HTML & CSS

1. What is semantic HTML, and why does it matter for accessibility and SEO?
2. Explain the CSS box model and how box-sizing affects it.
3. What's the difference between Flexbox and CSS Grid, and when would you use each?
4. How does CSS specificity work when multiple rules target the same element?
5. What is responsive design, and how do media queries enable it?
6. What is the difference between relative, absolute, fixed, and sticky positioning?

JavaScript Fundamentals

1. What is a closure, and can you describe a practical use case for one?
2. Explain the event loop and how the call stack relates to async operations.
3. What is the difference between '==' and '===', and why does it matter?
4. How does 'this' behave differently in arrow functions versus regular functions?
5. What are Promises, and how do async/await simplify working with them?
6. What's the difference between 'let', 'const', and 'var' in terms of scope?

Frameworks & Modern Practices

1. What is the virtual DOM, and how does it improve rendering performance?
2. How do React hooks like useState and useEffect change component behavior?
3. What is component-based architecture, and why is it preferred over monolithic UIs?
4. What is state management, and when would you reach for a library like Redux?
5. What is the difference between controlled and uncontrolled form components?
6. How does server-side rendering differ from client-side rendering, and what are the trade-offs?

Performance & Optimization

1. What causes browser reflows and repaints, and how can you minimize them?
2. What is lazy loading, and how does it improve initial page load time?

3. How does code splitting help reduce bundle size in a large application?
4. What are some common techniques to optimize images for the web?
5. What is debouncing versus throttling, and when would you use each?
6. How would you diagnose and fix a memory leak in a frontend application?

Tooling, Accessibility & General

1. What is the purpose of a module bundler like Webpack or Vite in a project?
2. How do you ensure a web application is accessible to keyboard and screen-reader users?
3. What is CORS, and why do browsers enforce it?
4. What is the difference between npm and a lockfile like package-lock.json?
5. How do you approach cross-browser compatibility issues in your CSS or JS?
6. What is a CSS preprocessor like Sass, and what advantages does it offer over plain CSS?
